^g Feeding America 2013 (http://www.feedingamerica.org/hunger-in-america/our-research/map-the-meal-gap/2013/KS_AllCounties_CDs_MMG_2013.pdf). The index is derived, in part, from Current Population Survey data using the Census Bureau definition of food insecure households, which means “unable, at some time during the year, to provide adequate food for one or more household members due to a lack of resources” (http://www.census.gov/newsroom/cspan/food_security/20121227_cspan_foodsecurity_3.pdf)

^k “The HCI SocioNeeds Index combines a set of socioeconomic factors—ranging from poverty to education—for all zip codes in the US. The determinants were standardized, averaged, and weighted to arrive at one composite index value for every zip code in the US. The Index formula maximizes the correlation to poor health outcomes, based on premature deaths and preventable hospitalizations.” Retrieved July 8, 2015 (<http://www.healthycommunitiesinstitute.com/news-release-new-population-health-tool-socioneds-index/>).
